Day 16: Assignment - Spring Security using JPA

Create a Spring Boot project having the following service endpoints

- CRUD endpoints for Student

- CRUD endpoints for Course

- Students/Admins should be able to register themselves to create a new account (create endpoints for them as well)

Implement Spring security in application and configure all service endpoints as follows..

- Create security configuration for student and admin resources so that only students can access student roles and admin can access everything.

NOTE: Use Database support for authenticating user for the user creation and UserDetailsService implementation as show in classroom example. Implement UserDetails interface.
